The US Inflation Calculator measures the buying power of the dollar over time. Just enter any two dates between 1913 and 2016, an amount, and click 'Calculate'.

Inflation Calculator

If in (enter year)

I purchased an item for \$

then in (enter year)

that same item would cost: **\$233.98**

Cumulative rate of inflation: **11.6%**

*Learn how this calculator works (<http://www.usinflationcalculator.com/frequently-asked-questions-faqs/#HowInflationCalculatorWorks>). This US Inflation Calculator uses the latest US government CPI data (<http://www.usinflationcalculator.com/inflation-calculator-information/consumer-price-index-and-annual-percent-changes-from-1913-to-2008/>) published on June 16, 2016 to adjust for inflation and calculate the cumulative inflation rate through May 2016. The Consumer Price Index (CPI) and inflation for June 2016 is scheduled for release by the United States government on July 15, 2016. (See a chart of recent inflation rates (<http://www.usinflationcalculator.com/inflation/current-inflation-rates/>)).

The cost of living in the United States picked up for a third straight month in May, according to a government report released on Thursday, June 16.

Increases in the prices of goods and services were again broad-based, led by energy, although US consumers did catch a bit of a break with declining food prices. In addition, inflation over the longer haul eased compared to a month earlier.
