Report Your Herp Observations

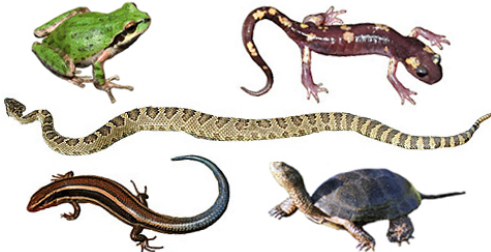

This website documents the diverse amphibian and reptile fauna found in the state of California using:

- [Lists](#), [Photo Indexes](#), [Range Maps](#), and Species Accounts of all native and non-native amphibians and reptiles established in California
- [Sound Recordings](#), including the [Calls of California's Frogs and Toads](#)
- [Short Videos](#) of many species
- Lists of [Species that Might Occur](#) in California and of [Established Non-native Species](#) in California
- Tips for [Identifying](#) Amphibians and Reptiles found in the wild in California
- Current California Collecting [Regulations](#), and Fieldherping Information
- Current Conservation Status information

In addition to complete coverage of California's herps, the site includes photo indexes, sounds, and videos of some reptiles and amphibians from areas [outside of California](#), including a complete list of herps of the [Northwest](#), some [salamanders of the Appalachian Mountains](#), many of the herps of [Texas](#), [Baja California](#), and the [Southwest](#), and herps from [other areas](#).

For an introduction to the site that does not require knowledge of the names of the animals, look at the [Behavior and Life History](#) pages, the [Photo Indexes](#), or the pages for the [San Francisco Bay Area](#) and for coastal [Southern California](#).

This site does not provide information regarding keeping and caring for captive amphibians or reptiles. It is not a place where you can get information about buying
