Welcome to the California Fish Website!

This site provides information and links about California's freshwater and **anadromous** fish, current aquatic management issues, and research that is being done to improve the conservation of native fish species.

What's New? Help us to beta test the [Cal Fish App](#)! Use your smartphone, tablet, or other geo-location-enabled device to get information on the freshwater fish species for your current location in California. Then answer a short [survey](#) to help us to improve the app. [Ask us](#) how you can create a bookmark or icon on your device for quick access to the Fish App!

Fish Species Profiles Find information on the life history of the fish species of California both native and non-native. Simply [search by species name](#). You can also [search by the county and watershed](#) in which the species is found.

Publications ***NEW Reports being added*** Read scientific literature on topics connected to freshwater fish and California's watersheds.

Research Projects Find out what work is being done in the field right now to learn more about California's fish species and the habitats they live in.

Conversions and Glossary Browse a listing of definitions and explanations to supplement and clarify the rest of the information on the site.

Fish People Learn about some of the scientists currently studying our local fishes and their habitats.
