Subject: Limited Investigation Summary
Former Del Rey Cleaners
310 Culver Boulevard
Playa Del Rey, CA 90293-7704

Dear Mr. Romano:

Bowyer Environmental Consulting, Inc. (BEC) has prepared this summary of a recent limited investigation (Summary Report) at the request of RCV-1, LLC (RCV). The work presented in this Summary Report was conducted at the former Del Rey Cleaners facility (Site). The Site is located at 310 Culver Boulevard in Playa Del Rey, California, as shown on Figure 1.

The Report summarizes a soil and soil vapor investigation that was performed at the Site at your request. It is our understanding that RCV is considering the purchase of the Site. However, in advance of decision making, RCV desired to obtain a better understanding of the current Site conditions, and the potential for those conditions to represent a potential indoor air risk to future users and/or neighbors.

SITE BACKGROUND

The 0.24 acre property is currently vacant. A single story structure occupies approximately one half of the Site, as shown on Figure 2.

The Site was utilized for dry cleaning purposes for approximately 35 years (between 1962 and 2007). Prior to that, the property was reportedly (DCI Services, May 3, 2000) utilized as an auto repair garage from between 1935 and 1962.

Based on investigations conducted in 2000 (DCI Services, May 9, 2000), 2002 (Targhee, Inc., February 20, 2002) and 2011 (CSC Targhee, Inc., March 3, 2011), tetrachloroethene (PCE), a compounds utilized in the dry cleaning process, has been observed at elevated concentrations in soil and groundwater beneath the site. In 2012, the Los Angeles Area Regional Water Quality Control Board (RWQCB) issued an Order pursuant to California Water Code Section 13267 (Order). The Order, which was issued to the Executor, Estate of Barry Moschel, required the development of a workplan to complete the delineation of impacts to soil, soil vapor and groundwater related to releases that are believed to have occurred from the former dry cleaning operations.

SCOPE OF WORK

There were two concurrent tasks conducted as part of this limited investigation (soil vapor and soil matrix sampling). The work was conducted between March 17th and March 21st 2014. The methods employed during these investigations are summarized in the following subsections.

Soil Vapor Survey

Soil Gas Screening Locations

A total of up to twenty soil gas probes were installed to depths of approximately 5.0 feet below surface grade (bgs). One of these points (V-7) was installed at shallower depth (approximately 1.5 feet bgs) due to shallow high moisture conditions observed in this area. The approximate location of the soil vapor probes is shown on Figure 4.

Drilling, Sampling and Analyses

Soil vapor probes were installed, sampled and analyzed in accordance with the Department of Toxic Substances Control and California Regional Water Quality Board Active Soil Gas Investigations (2012) Guidance. Prior to drilling at locations on pavement or a concrete, a surface penetration was made using a wet core drill, or equivalent. In turf areas the vegetation was cleared away with a shovel or similar tool. Drilling was performed using direct push geoprobe methods. The vapor points were installed and left in place for a minimum of 48 hours prior to the collection of vapor samples.

Vapor purge tests were performed on the initial samples (V-10) to determine optimum recovery rates. Based on these tests it was determined that the optimum pre-sample purge consists of the removal of three purge volumes. In addition, leak tests were conducted and a duplicate sample was collected from V-14 as a quality assurance/quality control measure.

Each of the collected vapor samples were analyzed for volatile organic compounds (VOCs) via USEPA Method 8260B. Copies of the laboratory reports are provided in Attachment A.

Soil Matrix Sampling

Companion soil samples were collected from each soil vapor location. Head space readings were collected and recorded during the drilling program.

The samples collected from each of the probe locations were subsampled using an Encore sampling device. The soil samples and subsamples were stored in a chilled container pending transport, under chain-of-custody procedures, to ATL Laboratories, Inc. (ATL), a fixed base analytical laboratory. Copies of the laboratory reports are provided in Attachment A.

Support Activities

Site Restoration

Vapor sampling will be removed following the completion of sample collection. The tubing will be removed by hand and the opening will be backfilled with bentonite. The surface at penetrations in paved areas will be patched with field-mixed Portland cement concrete or cold-mix asphalt patch and hand-finished in an attempt to be similar to the surrounding pavement.

Investigation-Derived Waste

Investigation-Derived waste (IDW) is expected generated during this program included two drums of soil and one of wash water. This waste is currently being characterized and will be properly disposed of off Site in the near future.

RESULTS

The location of soil vapor and companion soil boring locations probes and soil borings installed as part of this Study are shown on Figure 2. The results obtained from testing

of soil vapor and soil matrix samples during this investigations are summarized on Tables 1, and 2, respectively.

Soil Vapor

Eight VOCs were detected in collected soil vapor samples. These compounds included PCE and related compounds, such as trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene and vinyl chloride. In addition, low levels of toluene, chlorobenzene and chloroform were also observed in a limited number of samples. The results were compared to conservative screening criteria (California Human Health Screening Levels [CHHSLs]). PCE and TCE were the only compounds observed at concentrations in excess of their respective CHHSLs. PCE was observed in excess of its CHHSL in each sample collected, with the highest concentration (210,000 micrograms per liter [ug/l] observed at V-7.

Soil Matrix

Four VOCs were detected in collected soil matrix samples. These compounds included PCE and related compounds, such as TCE and cis-1,2-DCE. In addition, a low level of 1,4-dichlorobenzene was also observed in one sample (V-7). The results were compared to conservative screening criteria (EPA Region IX Regional Screening Levels [RSLs]). PCE was the only compounds observed at concentrations in excess of its RSL, and this condition was only observed in one sample (V-7). The highest detected concentration of PCE (600,000 micrograms per kilogram [ug/kg]) was observed at V-7.

CLOSING

PCE and related compounds were observed in soil and soil vapor over a wide portion of the Site. The most elevated concentrations were observed in samples collected from near the former dry cleaning machine and near the property boundary on the eastern portion of the Site.

Information has been collected and available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. However, the scope of the investigations was limited, and it is possible that other and/or additional sources of contamination are present at the Site that have not been assessed. The findings and conclusions were based solely on the available data. Additional and/or new information could have a significant impact on the findings, conclusions and recommendations. BEC makes no warranty, expressed or implied, except that the services have been performed in

accordance with generally accepted environmental investigation practices applicable at the time and location of the work performed as summarized in this Summary Report.

If you have any questions or comments, regarding this Summary Report, please feel free to call.

Sincerely,

Brett H. Bowyer, P.G.
Principal

ANALYSES REQUESTED

1. EPA 8260B - Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers. Tubing placed in the ground for soil gas sampling was purged three different times as recommended by DTSC/RWQCB guidance documents. This purge test determined how many purges of the soil gas tubing were needed throughout the project. One, three and ten purge volumes were analyzed to make this determination.

A tracer gas mixture of n-propanol and n-pentane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-propanol or n-pentane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min except when noted differently on the chain of custody record using a gas tight syringe. 3 purge volumes were used since this purging level gave the highest results for the compound(s) of greatest interest.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, Matrix Spike (MS) and Matrix Spike Duplicates (MSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

A handwritten signature in black ink, appearing to read "Steve Jones".

Re: ATL Work Order Number : 1400813
Client Reference : Del Rey Cleaners, 170101

Enclosed are the results for sample(s) received on March 17, 2014 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "Eddie Rodriguez".

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

All volatile analyses were performed using 5035 preservation requirements. Any high level dilutions were performed on a preserved methanol sample unless otherwise noted.

Notes and Definitions

ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Re: ATL Work Order Number : 1400816
Client Reference : Del Rey Cleaners, 170101

Enclosed are the results for sample(s) received on March 18, 2014 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "Eddie Rodriguez".

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

All volatile analyses were performed using 5035 preservation requirements. Any high level dilutions were performed on a preserved methanol sample unless otherwise noted.

Notes and Definitions

ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.
