1. No need to proceed with the water hook up.
2. We are currently removing approximately 1000 lbs (1/2 ton) of homeless-related trash and other illegally dumped debris per month, primarily from Area B and C-North. We expect this amount to continue for the foreseeable future until the restoration commences. At which point illegal activity (primarily camping) will decrease to almost zero due to increased on-site restoration activity and worker presence. I estimate that misc trash associated with an almost zero homeless camp presence would be mainly associated with road-side dumping of less than 200 lbs per month post-restoration.
