## HOUSEHOLD SIZE BY VEHICLES AVAILABLE

Universe: Households

2010-2014 American Community Survey 5-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

	Census Tract 2755, Los Angeles County, California	
	Estimate	Margin of Error
Total:	1,620	+/-61
No vehicle available	212	+/-87
1 vehicle available	642	+/-124
2 vehicles available	538	+/-115
3 vehicles available	199	+/-79
4 or more vehicles available	29	+/-25
1-person household:	300	+/-98
No vehicle available	77	+/-42
1 vehicle available	201	+/-92
2 vehicles available	15	+/-19
3 vehicles available	0	+/-17
4 or more vehicles available	7	+/-11
2-person household:	528	+/-126
No vehicle available	90	+/-53
1 vehicle available	162	+/-66
2 vehicles available	253	+/-103
3 vehicles available	23	+/-21
4 or more vehicles available	0	+/-17
3-person household:	251	+/-89
No vehicle available	45	+/-43
1 vehicle available	73	+/-55
2 vehicles available	62	+/-37
3 vehicles available	71	+/-42
4 or more vehicles available	0	+/-17
4-or-more-person household:	541	+/-127
No vehicle available	0	+/-17
1 vehicle available	206	+/-96
2 vehicles available	208	+/-75
3 vehicles available	105	+/-68
4 or more vehicles available	22	+/-23

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data).

The effect of nonsampling error is not represented in these tables.

Workers include members of the Armed Forces and civilians who were at work last week.

While the 2010-2014 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

#### Explanation of Symbols:

1. An '\*\*\*' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '\*\*\*\*' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '\*\*\*\*\*' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.
