1. Site Assessment: Conduct a thorough assessment of the site, including soil testing, groundwater monitoring, and identification of potential contamination sources. 2. Remediation Planning: Develop a detailed remediation plan based on the site assessment findings, outlining the scope, objectives, and timeline of the project. 3. Design and Construction: Design and construct the remediation system, ensuring compliance with applicable regulations and standards. 4. Implementation: Implement the remediation system, including the installation of monitoring wells, extraction systems, and treatment units. 5. Monitoring and Evaluation: Monitor the system's performance regularly, collecting data on contaminant levels and system efficiency. 6. Reporting: Prepare and submit regular reports to the relevant authorities, detailing the progress of the remediation and the results of monitoring activities.	1.
