Site history, stand age, comments: <u>I am in a trough area between two hills that slopes down toward the city. It's completely dry now but probably has water flowing through during a storm. The stand is dominated by a rhizomatous agrostis species, possibly capillaris or gigantea. The agrostis is in early to peak bloom while all other grass species, except Holcus, are dry and dropping seed. Overall the area is dominated by invasive grasses with patches and swaths of purple needle grass in the high areas and California oat grass in others including at edge of path. Soft brome, heading grass, velvet grass, rattlesnake grass and rye grass dominate, Pipo, Bupi, Todi and Cotoneaster also present surrounding plot.</u>
