#### SITE DESCRIPTION:

This site is managed by State Parks as part of Del Norte Coast Redwoods State Park. Course grain to granule beach.

#### SEASONAL and SPECIAL RESOURCE CONCERN

Offshore rocks provide roosting and nesting habitat for birds and haul out locations for marine mammals. Care should be taken so that response activities do not flush wildlife from these areas. The offshore rocks have cultural significance for local tribes.

#### RESOURCES OF PRIMARY CONCERN

Wilson Creek has anadromous salmonids. The rocks are sensitive to human intrusion year round, especially during nesting season (03-09) when the adults are on eggs and until the young have fledged from the nest.

Shorebirds, seabirds, waterfowl.

Harlequin duck (SSC)(01-04;09-12) mouth of Wilson Creek

## CONCERNS and ADVICE to RESPONDERS:

The rugged coastline will prevent on shore response over most of this area. Off site measures including dispersants should be considered when a spill threatens to impact this area. Overflights should be careful to maintain flight path and altitude clearance distances that are large enough to prevent the flushing of birds and marine mammals from their nests, roosts, and haul outs sanctuaries on the off shore rocks in this area.

## HAZARDS and RESTRICTIONS:

Beach is steep during storm months (winter and early spring).

## SITE STRATEGIES

### Strategy 1-175.1 Objective: Pre-clean beach

Remove woody debris to above the high tide line before oil arrives.
