SITE DESCRIPTION:

This site includes the mouth of Dark Gulch and shoreline in the vicinity. Offshore rocks in the area are managed by BLM as part of the California Coastal National Monument. Steep gradient coastal stream. Cobbled beach with kelp debris. Bedrock headlands. Offshore rocks and seastacks.

SEASONAL and SPECIAL RESOURCE CONCERN

The rocks are sensitive to human intrusion year round. Response efforts that cause any disturbance to marine mammals or nesting seabirds should be avoided whenever possible.

RESOURCES OF PRIMARY CONCERN

Salmonid migrations would occur mostly during high water flow events during winter and spring. Oiling of the stream mouth could cause long lasting damage.

Seabird rookeries (03-09): rocky headlands, offshore rocks, and seastacks shelter Pelagic cormorant, Pigeon guillemot, Western gull, Black oystercatcher

Anadromous salmonids: Coho salmon (FE, SE), Steelhead (FT):

- spawning runs (09-06)
- juveniles/smolts (02-08)

Red abalone

CONCERNS and ADVICE to RESPONDERS:

The rugged coastline will prevent on shore response over most of this area. Off site measures including dispersants should be considered when a spill threatens to impact this area. Overflights should be careful to maintain flight path and altitude clearance distances that are large enough to prevent the flushing of birds and marine mammals from their nests, roosts, and haul outs sanctuaries on the offshore rocks in this area.

HAZARDS and RESTRICTIONS:

Extreme currents, offshore rocks, high energy shoreline

SITE STRATEGIES

This site is best protected by preventing the oil from arriving here, when possible. Off site response options including dispersants should be considered.

Strategy 1-466.1 Objective: Prevent spilled oil from floating to this site.

Conventional on-scene response is not possible at this site. Protect with off-site response measures only.
