Offshore rocks in the area are managed by BLM as part of the California Coastal National Monument. Rocky headlands, offshore rocks, and seasonal inlet to Greenwood Creek with small pockets of fringing marsh behind the beach.

The marsh provides habitat for many kinds of ducks and shorebirds that forage there year round. Salmonid migrations through the estuary would occur mostly during high water flow events during winter and spring.

**RESOURCES OF PRIMARY CONCERN**

## CONCERNS and ADVICE to RESPONDERS:

Last Page Update :

The rugged coastline will prevent on shore response over most of this area. Off site measures including dispersants should be considered when a spill threatens to impact this area. Overflights should be careful to maintain flight path and altitude clearance distances that are large enough to prevent the flushing of birds and marine mammals from their nests, roosts, and haul outs sanctuaries on the offshore rocks in this area.

## HAZARDS and RESTRICTIONS:

Extreme currents, offshore rocks, high energy shoreline, short steep beaches in some areas

## SITE STRATEGIES

This site is best protected by preventing the oil from arriving here, when possible. Off site response options including dispersants should be considered.

Strategy 1-474.1 Objective: Pre-clean debris before oil arrives.

Pre-clean debris before oil arrives.

This site needs to be assessed for pre-cleaning (equipment) requirements. (See strategy #2)

Strategy 1-474.2 Objective: Assess site conditions for response needs.

Complete an overflight or send personnel to the site to assess the prevailing conditions and appropriate response, if any.
