#### SITE DESCRIPTION:

This site includes the tidal estuary at the mouth of Cottaneva Creek. The site is owned by Mendocino Redwood Company. Offshore rocks in the area are managed by BLM as part of the California Coastal National Monument; Note: some are in private ownership. Site is associated with the following State Marine Protected Area(s): Rockport Rocks Special Closure and Vizcaino Rock Special Closure. Mixed sand and gravel beach. Minor wetland.

#### SEASONAL and SPECIAL RESOURCE CONCERN

Breeding seabirds will use these rocks for nesting in the spring. Offshore rocks provide roosting and nesting habitat for birds and haul out locations for marine mammals. Care should be taken so that response activities do not flush wildlife from these areas. The offshore rocks have cultural significance for local tribes.

#### RESOURCES OF PRIMARY CONCERN

Minor freshwater marsh at creek outlet.

The rocks are sensitive to human intrusion year round, especially during nesting season (03-09) when the adults are on eggs and until the young have fledged from the nest.

Common murre (2004 estimates: ~2200 Rockport Rocks, ~9700 Cape Vizcaino). Brandt's cormorant (~2500, 2002)

California brown pelican (04-11). Seabirds, shorebirds, waterfowl.

marine mammals

Anadromous salmonids:

Coho salmon (FE/SE), steelhead trout (FT), Chinook salmon (FT) - all life stages, estuary use year round  
 Groundfish (EFH)

Surfsmelt and Nightsmelt spawning area (04-08)

Red abalone

## CONCERNS and ADVICE to RESPONDERS:

Last Page Update :

The rugged coastline will prevent on shore response over most of this area. Off site measures including dispersants should be considered when a spill threatens to impact this area. Overflights should be careful to maintain flight path and altitude clearance distances that are large enough to prevent the flushing of birds and marine mammals from their nests, roosts, and haul outs sanctuaries on the offshore rocks in this area.

## HAZARDS and RESTRICTIONS:

Private property.

## SITE STRATEGIES

This site is best protected by preventing the oil from arriving here, when possible. Off site response options including dispersants should be considered.
