Rincon Creek and Rincon Point: this creek has a small marsh area several yards inland from the ocean. The point is an alluvial fan composed of cobbles underlain by sand. It is fairly stable and resistant to erosion. There are several private homes (with private roads) along the point, seabird and shorebird activity all year, and rocky intertidal habitat.

Resources at Risk:*ESI and Habitat:* 10A Salt - and brackish-water marshes

6B Riprap

3A Fine- to medium-grained sand beaches

1A Exposed Rocky Shore

Concerns and Advice to Responders:

The lagoon is habitat for sensitive species. Both habitat and species can be injured by oil and response/cleanup activities. Responders must minimize disturbance in creek and avoid trampling oil into sediments.

Hazard and Restrictions:

Unhealthy levels of coliform bacteria have been found in this area. Roads, trails, beach cliffs and hillsides may be unstable in wet weather. Beware of pedestrians, ticks, poison oak, and rattlesnakes. Watch for falling rocks when working on beaches backed by cliffs. Safe access may be dependent on tide and surf. Sand may be soft so lower tire pressure on all vehicles.

Site Strategies:**Site Validation Level: III****Strategy: 4-701.1 Objective:** Exclude Oil

Strategy: Deploy exclusion booms across the leading edge of inlet. Place the booms in a configuration that forms an adjustable oil collection pocket that can accommodate changes in flow direction. Back exclusion booms with sorbent booms to minimize leakage. Line the shorelines and any side channels within the inlet to prevent collateral oiling.

Strategy: 4-701.2 Objective: Erect Filter Fence

Strategy: Construct a filter fence across the front of the channel where the inlet is narrowest, water flows are low or dry, the ground can receive and hold metal stakes, and the spill is heavy oil. Monitor barrier and replace pom-poms as necessary to maintain effectiveness.

Strategy: 4-701.3 Objective: Shoreline Pre-Clean: Resource Specialist Supervision Required

Strategy: Consult with resource trustees regarding wildlife issues before undertaking this activity. Hand crews to move and store kelp, driftwood, vegetative debris, trash, and other materials above high-tide line. Dispose of trash. Replace unsoiled debris in its former location once the threat of oiling is past.
