## SITE DESCRIPTION:

This rugged shoreline is managed by State Parks as part of Del Norte Coast Redwoods State Park. The offshore rocks are included in BLM's California Coastal National Monument. Offshore rocks, rocky headlands from Enderts Beach to Damnation Creek.

## SEASONAL and SPECIAL RESOURCE CONCERN

Breeding seabirds will use these rocks for nesting in the spring. Offshore rocks provide roosting and nesting habitat for birds and haul out locations for marine mammals. Care should be taken so that response activities do not flush wildlife from these areas. The offshore rocks have cultural significance for local tribes.

## RESOURCES OF PRIMARY CONCERN

The rocks are sensitive to human intrusion year round, especially during nesting season (03-09) when the adults are on eggs and until the young have fledged from the nest.

Seabird rookeries (04-09): Brandt's and pelagic cormorants, Western gulls, common murre, pigeon guillemots - adults present (01-12).

Double crested cormorant (01-12)

-Breeding/nesting (03-09)

Marbled murrelets (FT,SE)(01-12) feed in open waters.

## CONCERNS and ADVICE to RESPONDERS:

The rugged coastline will prevent on shore response over most of this area. Off site measures including dispersants should be considered when a spill threatens to impact this area. Overflights should be careful to maintain flight path and altitude clearance distances that are large enough to prevent the flushing of birds and marine mammals from their nests, roosts, and haul outs sanctuaries on the offshore rocks in this area.

## HAZARDS and RESTRICTIONS:

Extreme currents, offshore rocks, high energy shoreline, short steep beaches in some areas.

## SITE STRATEGIES

This site is best protected by preventing the oil from arriving here, when possible. Off site response options including dispersants should be considered.
