SITE DESCRIPTION:

This site includes the mouth of Big Salmon Creek and nearby shoreline of Whitesboro Cove and Salmon Point. Offshore rocks in the area are managed by BLM as part of the California Coastal National Monument. Rocky bluffs, offshore rocks, and tidal inlet to Big Salmon Creek. Fine to medium grained sandy beach on the northside of the creek. Fringing marsh within Big Salmon Creek.

SEASONAL and SPECIAL RESOURCE CONCERN

Salmonid migrations would occur mostly during high water flow events during winter and spring. Oiling of the stream mouth could cause long lasting damage to the fish living in this watershed.

RESOURCES OF PRIMARY CONCERN

Limited area of habitat impact on extreme high tides where oiling, and the resulting need for cleaning, could be minimized especially when dealing with persistent products.

Seabirds, shorebirds, waterfowl, raptors. Nesting seabird colonies: pelagic cormorant, Pigeon guillemot, Black oystercatcher, Western gull (03-09). The small marsh is visited by foraging shorebirds and waterfowl (mergansers, grebes)
California brown pelican (04-11)
Osprey (01-12)
Canada geese

Anadromous salmonids: Coho salmon (FE,SE), Steelhead (FT):
- spawning runs (09-06)
- juveniles/smolts (02-08)

Red abalone

CONCERNS and ADVICE to RESPONDERS:

The rugged coastline will prevent on shore response over most of this area. Off site measures including dispersants should be considered when a spill threatens to impact this area. Overflights should be careful to maintain flight path and altitude clearance distances that are large enough to prevent the flushing of birds and marine mammals from their nests, roosts, and haul outs sanctuaries on the offshore rocks in this area.

HAZARDS and RESTRICTIONS:

Extreme currents, offshore rocks, high energy shoreline

SITE STRATEGIES

Strategy 1-470.1 Objective: Filter Fence

Movement of oil upstream could be minimized by the installation of filter fence.
