**SITE DESCRIPTION:**

These offshore rocks are managed by the BLM as part of the California Coastal National Monument. Nearshore rock. Closest beaches are of coarse sediments.

**SEASONAL and SPECIAL RESOURCE CONCERN**

Breeding seabirds will use these rocks for nesting in the spring. Offshore rocks provide roosting and nesting habitat for birds and haul out locations for marine mammals. Care should be taken so that response activities do not flush wildlife from these areas. The offshore rocks have cultural significance for local tribes.

**RESOURCES OF PRIMARY CONCERN**

The rocks are sensitive to human intrusion year round, especially during nesting season (03-09) when the adults are on eggs and until the young have fledged from the nest.

Seabird rookeries (05-09): Pelagic cormorant, Pigeon guillemot, Western gull  
 marine mammals  
 Groundfish (EFH)  
 Red abalone

## CONCERNS and ADVICE to RESPONDERS:

The rugged coastline will prevent on shore response over most of this area. Off site measures including dispersants should be considered when a spill threatens to impact this area. Overflights should be careful to maintain flight path and altitude clearance distances that are large enough to prevent the flushing of birds and marine mammals from their nests, roosts, and haul outs sanctuaries on the offshore rocks in this area.

## HAZARDS and RESTRICTIONS:

Extreme currents, high energy shoreline, offshore rocks

## SITE STRATEGIES

This site is best protected by preventing the oil from arriving here, when possible. Off site response options including dispersants should be considered.
