Additional Site Summary Comments:

Marine mammal pupping seasons: Harbor seals March - June; southern sea otters year-round. Leatherback sea turtles are most commonly observed August - November.

Concerns and Advice to Responders:

Harbor Seal pupping season is March - June; southern sea otters (threatened) pup year-round. Black abalone (endangered) may be present in rocky intertidal habitat (designated critical habitat). To protect seabirds, limit spill response activities within 1,000 feet of nesting seabirds when possible. Try to remain at least 100 yards away from marine mammals and sea turtles and if approached closely by a marine mammal or turtle while motoring, reduce speed and shift to neutral; do not engage props until the animals are observed at the surface, clear of the vessel.

Hazard and Restrictions:**Site Strategies:****Site Validation Level: II**

Strategy: 4-110.1 Objective: No Onsite Options: Consider Offshore Containment/Recovery/ART
Strategy: Offshore containment and recovery (OCR) are the preferred option although heavy surf may hinder these operations. No specific response equipment listed due to the many variables associated with each spill regarding OCR. Early consideration should be given to the use of applied response technologies.
