CONCERNS and ADVICE to RESPONDERS:

Species of concern are present year round. Harbor Seal pupping season is March-June. Peak sea otter pupping Jan-March.
 Throughout Division C, black abalone (endangered) may be present in rocky intertidal habitat (designated critical habitat).

To protect seabirds, limit spill response activities within 1,000 feet of nesting seabirds when possible.

Try to remain at least 100 yards away from marine mammals and sea turtles and if approached closely by a marine mammal or turtle while motoring, reduce speed and shift to neutral; do not engage props until the animals are observed at the surface, clear of the vessel.

HAZARDS and RESTRICTIONS:

Harmony Headlands State Park property.

SITE STRATEGIES

Strategy 4-105.1 Objective: Deflect or exclude oil from this rocky intertidal habitat.

Offshore containment and recovery (OCR) is the preferred option although heavy surf may hinder these operations. No specific response equipment listed due to the many variables associated with each spill regarding OCR. Early consideration should be given to the use of applied response technologies.
