C – Cultural, Historic, Archaeological; E – Entry/Owner/Access; O – Other; S – Safety; T – Trustee; X – Exclusion or Security

Additional Site Summary Comments:

A shoreline response plan for the Cabrillo National Monument was approved by the Area Committee in December of 2009. The plan provides many helpful guidelines for responders who might be called to clean up oil in the park, including pre-approved cleanup methods that can be used there. The plan can be found at the NPS website: <http://www.nps.gov/cabr/naturescience/oil-spill-response.htm>. The plan is also available on the OSPR website.

Concerns and Advice to Responders:

This is an extremely rugged coastline with reliably big surf and swift oceanic current. A healthy kelp forest with a thick surface canopy can be found offshore from the tip of Pt. Loma to just south of the world famous Ocean Beach Pier.

Hazard and Restrictions:

Extremely rocky coastline which is continuously affected by strong wave action.

Site Strategies:

Strategy: 6-310.1 Objective: Collect oil offshore before it arrives on the beach.

Strategy: Deploy a towed boom array to intercept floating petroleum. (The equipment list describes a single towed array). Multiple arrays may be required to address large spills.

Table of Response Resources

Equipment	Sub-Type	Size	Unit	QTY	Unit	Last Page Update
Boom	Harbor Boom			500	feet	<i>Strategy Updated:</i>
Vessel	Boom Boat			2		<i>Last Test: 6/19/2013</i>
Staff	Staff to Deploy			6		

Logistics:

Directions: None practical. This site is within the following Marine Protected Area: Cabrillo State Marine Reserve, and is

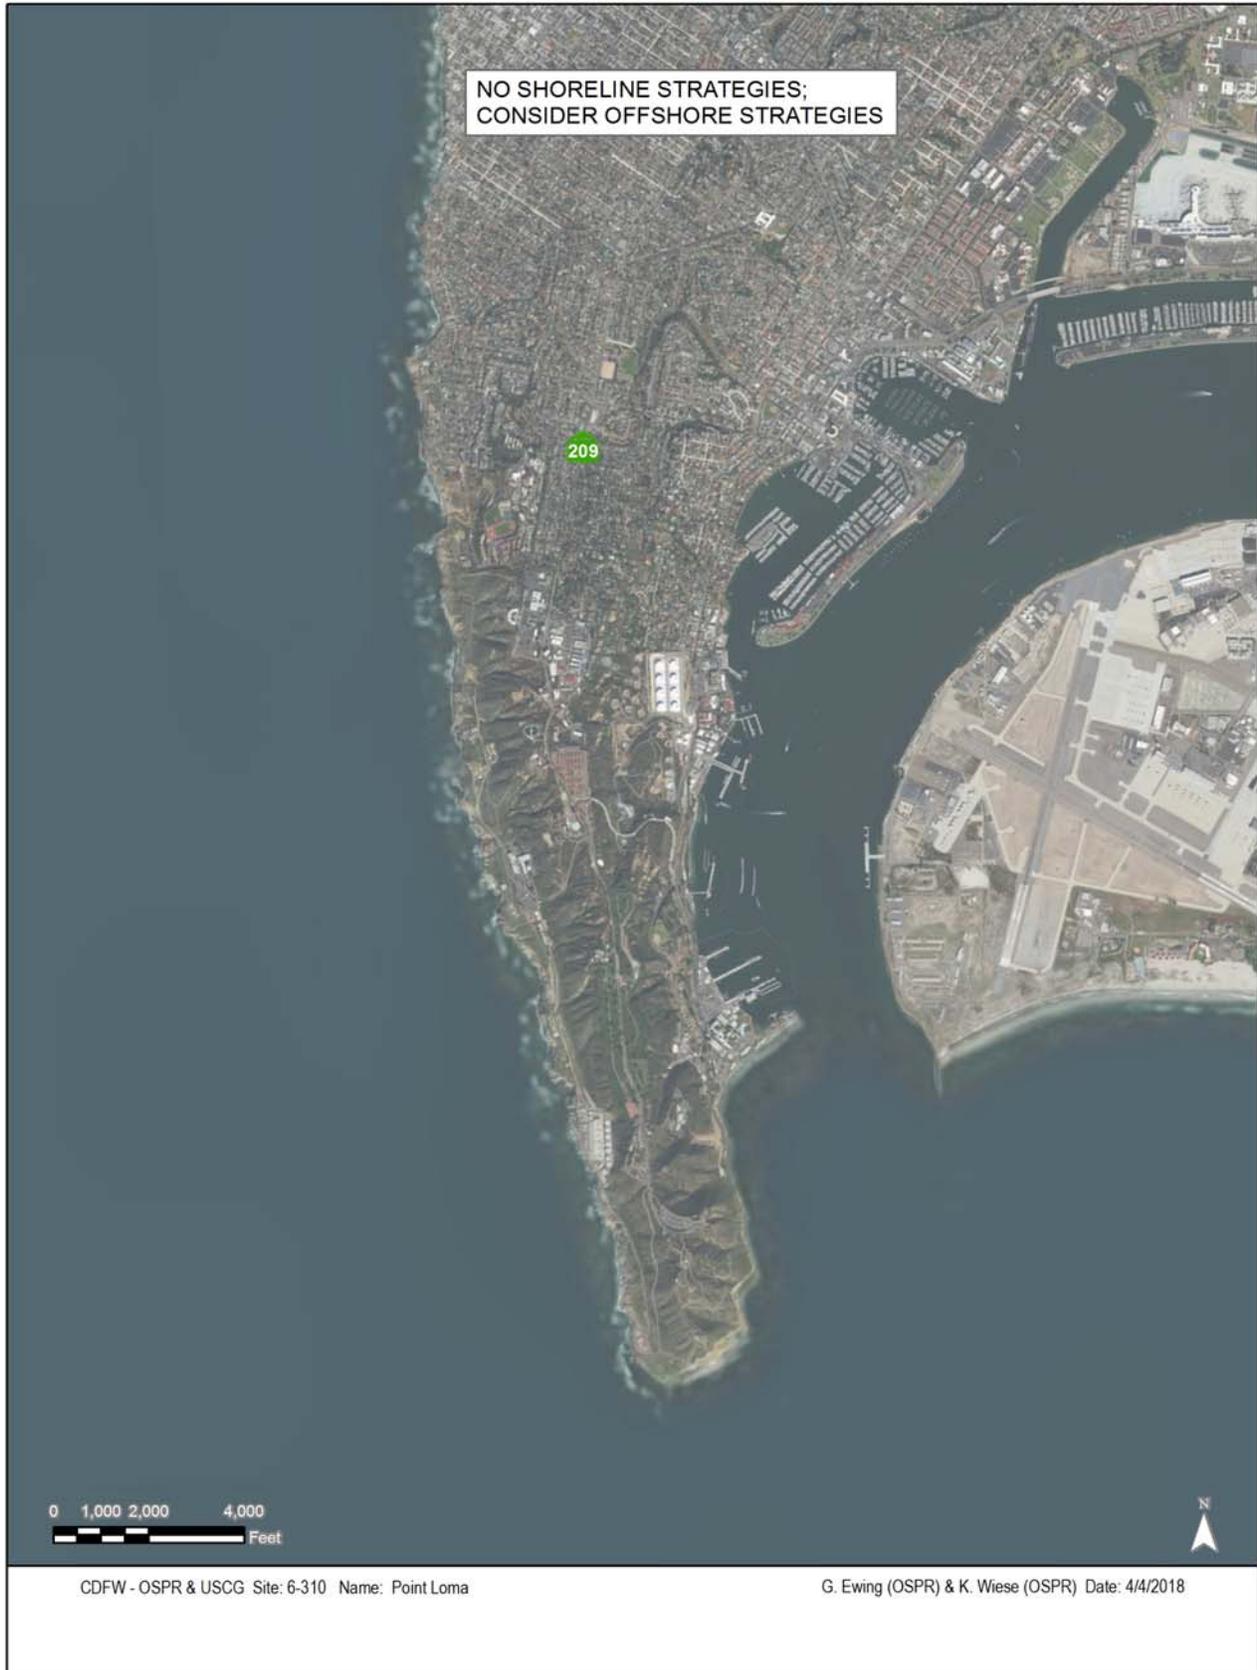

Land Access: The Pt. Loma Peninsula has many possible street access locations. The Cabrillo National Monument is

On-Water Limitations: Boat access only. Vessels should remain offshore to avoid submerged rocks. Ocean worthy
